HTML Day 1

Mastering the Basics

Kickstart your web development journey with a solid foundation in structure and semantics.

4-Hour Intensive Study Plan

The Core Concepts

Understanding what HTML is and why it matters.

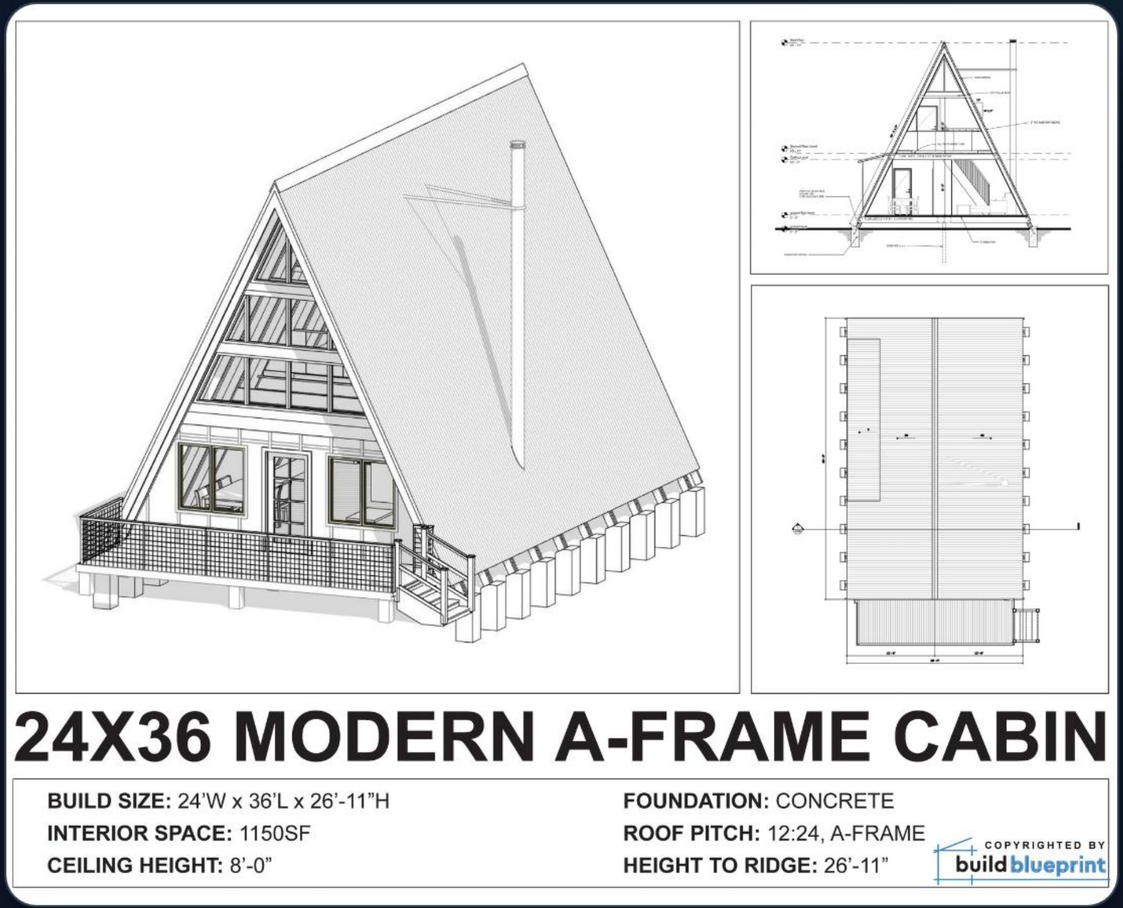
HTML = THE DIGITAL STRUCTURE

The House Analogy

Think of building a house. HTML is the **framework**—the walls, the floor, and the roof. Without it, the house cannot exist.

HTML + CSS + JS = Modern Website

- **HTML:** Structure (Walls/Rooms)
- **CSS:** Presentation (Paint/Decor)
- **JS:** Interaction (Electricity/Auto)



HOW THE WEB COMMUNICATES

1. Request

You type a URL in the browser. The browser sends a request to a remote server.

2. Processing

The server finds the requested file (HTML) and prepares it for shipping.

3. Delivery

The server sends the file back. The browser reads the code and paints the page.

Document Anatomy

Breaking down the code that powers every webpage.

STRUCTURE & THE ROOT

The "Brain" of the page. It contains metadata, titles, and links to styles. Users don't see this content directly.

The "Visible Heart". Everything users see—text, images, videos, and buttons—lives inside these tags.

THE ESSENTIAL TAGS

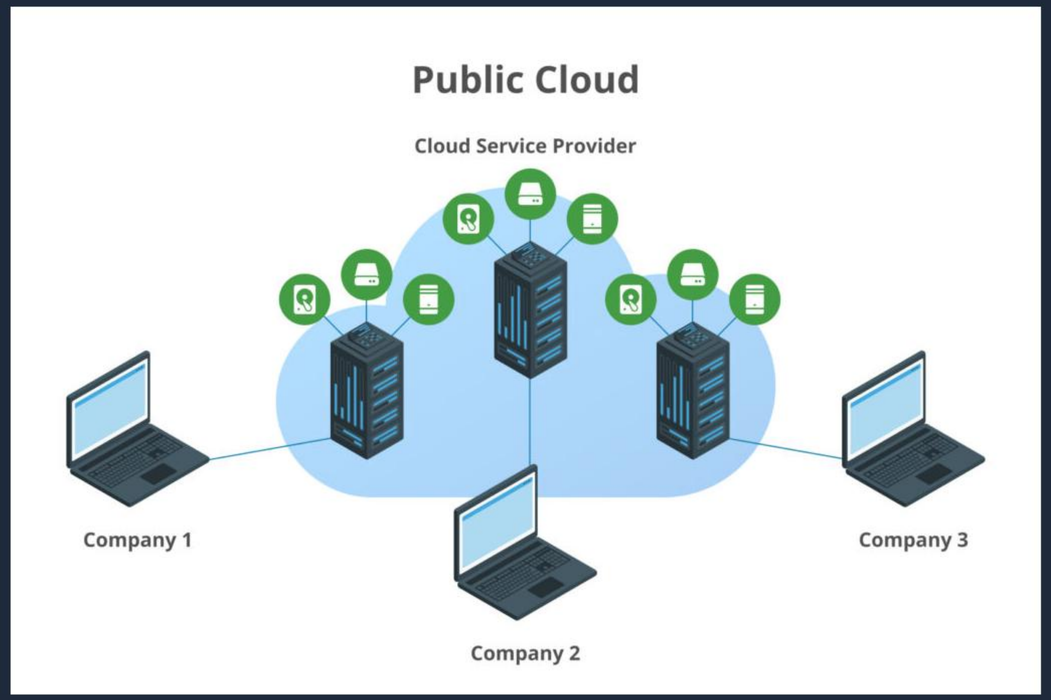
- ✓ — Declares that this is an HTML5 document.
- ✓ — The root element that wraps the entire document.
- ✓ `</div>` — Sets the name of the page shown in the browser tab.
- ✓ `to` — Defines headers in a hierarchy of importance.
- ✓ — Wraps blocks of text into readable paragraphs.

HEADING HIERARCHY

Like Chapters in a Book

Headings help search engines and users understand your content structure.

- : Main Title (One per page)
- : Major Sections
- : Sub-sections

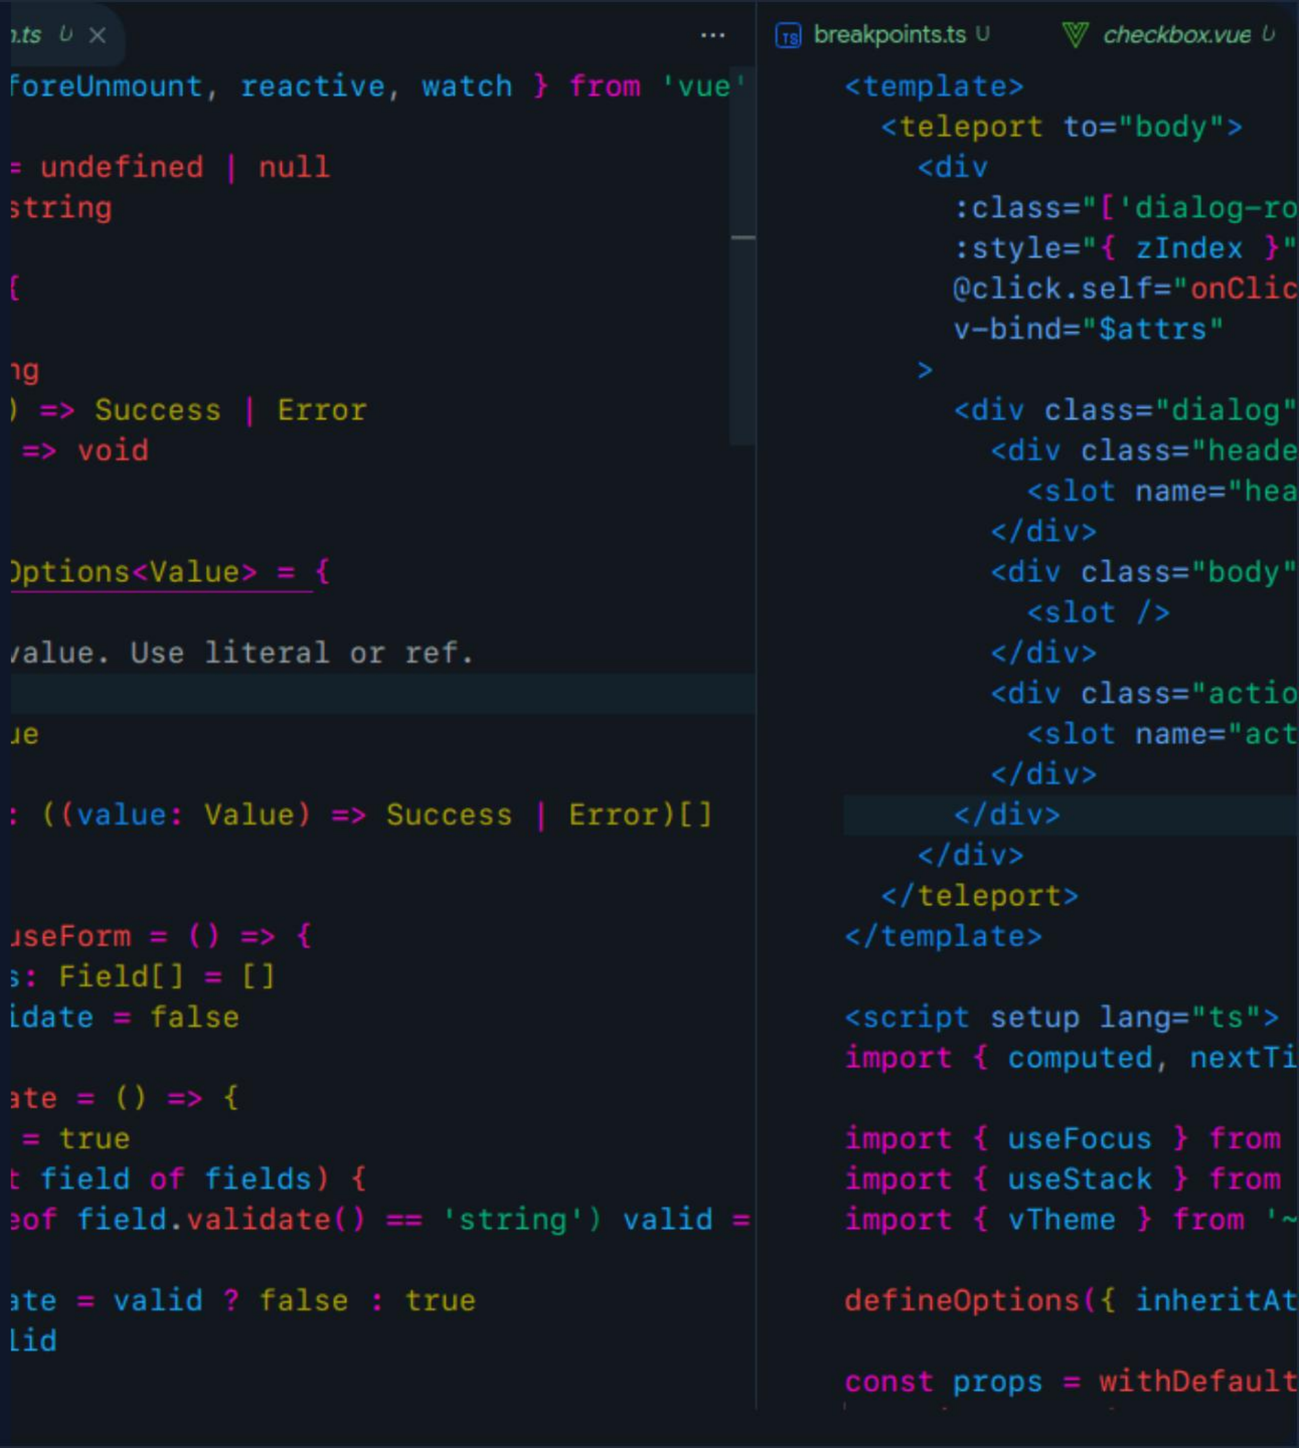


CODING YOUR FIRST PAGE

Simple Steps:

- Create a file named `index.html`
- Open it in VS Code or Notepad
- Write the basic tags and save
- Open the file in any browser

🎉 Congratulations! You are now a web creator.



INTERVIEW MASTERY

QUESTION	PROFESSIONAL ANSWER
What does HTML stand for?	HyperText Markup Language.
Who invented HTML?	Tim Berners-Lee in 1991.
Difference: HTML vs CSS?	HTML is structure; CSS is styling.
What is a Web Browser?	A software that renders HTML code into visuals.

PRACTICE LAB: TASKS

About Me

Create `about.html` with your name, goal, and why you code.

Hobbies

Create `hobbies.html` using a heading and 3 paragraphs.

College

Create `college.html` showing course name and dreams.

Q&A

Any questions before we start the practice lab?

Next Step: 4-Hour Implementation
