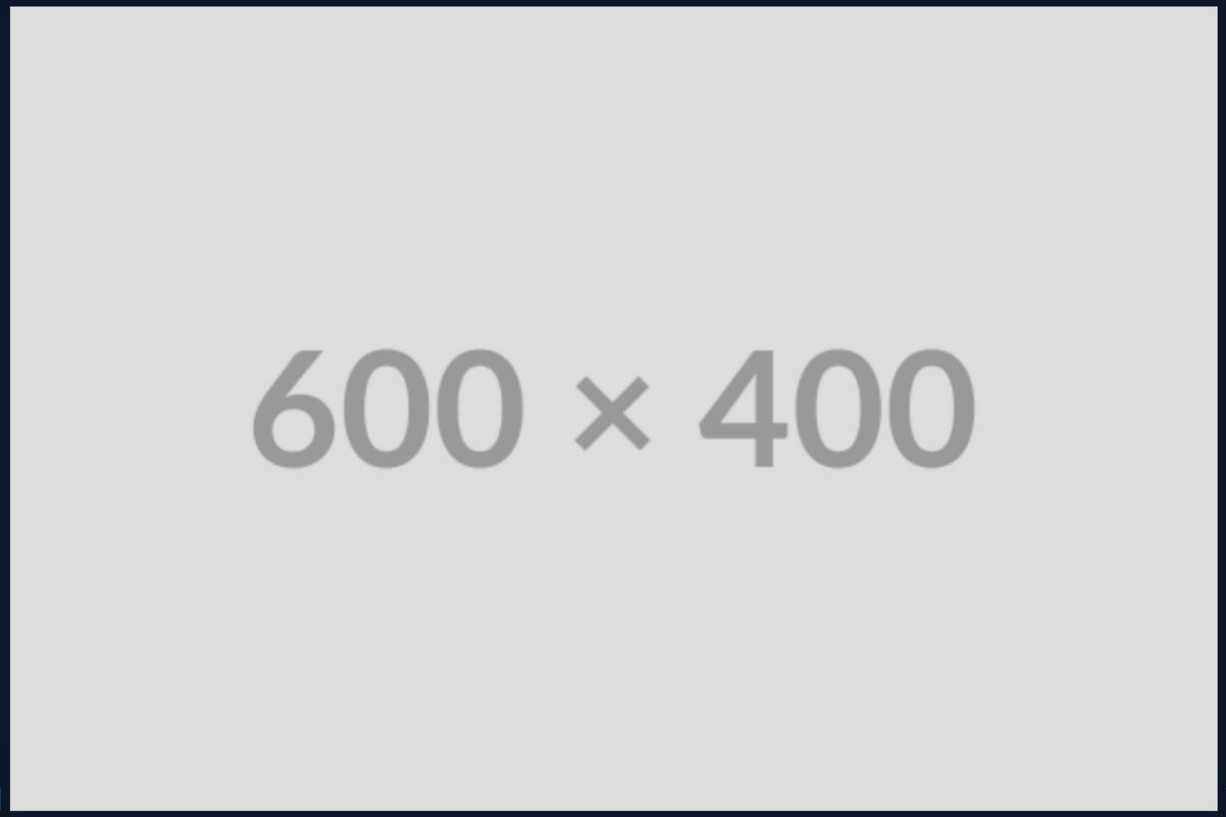
WEB DEVELOPMENT INTENSIVE

Day 3: Links & Images

Architecting Navigation and Visual Identity on the Web

Tag



Tag Hierarchy

4-Hour Intensive Study Plan

Hour 1

HTML Links Fundamentals (Anchor Tags)

Hour 2

Architecture: Internal vs External Links

Hour 3

Visuals: HTML Image Implementation

Hour 4

Applied Lab: Mini Website Project

Part 1: The Anchor Tag

Creating the connective pathways of the internet.

Links: The Doors of the Web

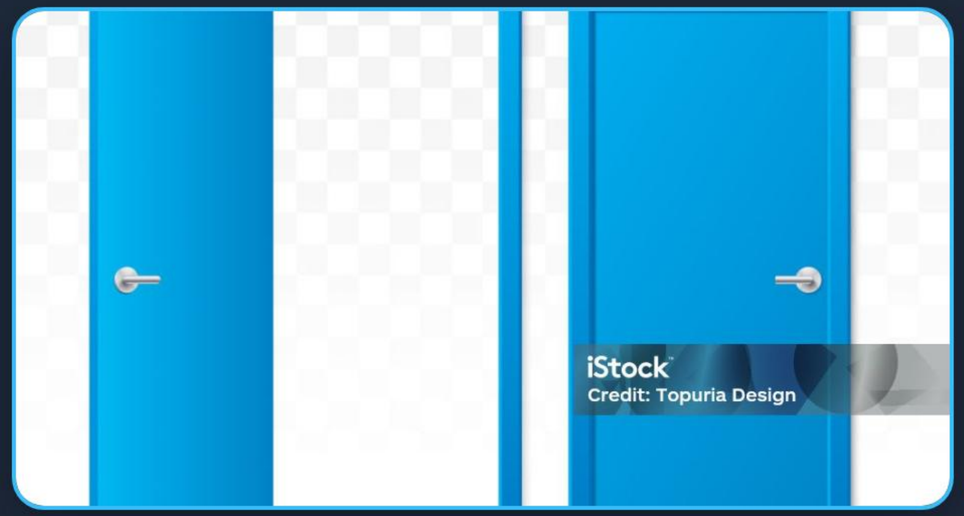
The Syntax

Links are created using the (anchor) tag. The `href` attribute defines the destination.

```
Link Text
```

Example:

```
Open Google
```



Real-life Analogy 🚪

Think of links as doors in a house. The Kitchen Door links to the Kitchen page; the Exit Door links to another site.

Internal vs. External Links

External Links

Point to a different website entirely. Uses absolute URLs (starting with https://).

Internal Links

Point to pages within the same project folder. Uses relative paths.

Relative Paths

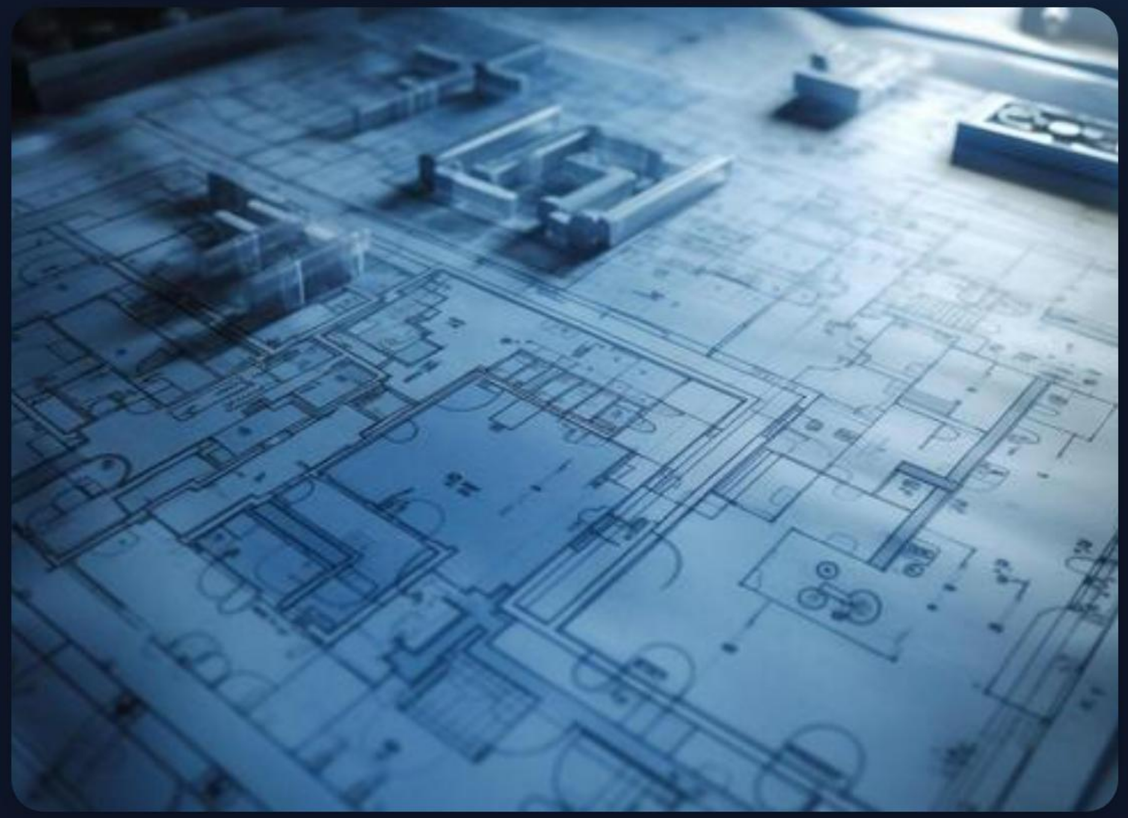
No domain needed. Just the filename if in the same directory.

Navigating the Building

The College Building Analogy 🏫

Internal links help students navigate **inside** the building.

- ✓ **Office:** `about.html`
- ✓ **Library:** `courses.html`
- ✓ **Reception:** `contact.html`



Advanced Attribute: target

_blank

Open in New Tab

Why use it?

By default, links open in the same tab. If you link to an **external** site, you might want to keep your site open in the original tab.

```
Open Google
```

Part 2: HTML Images

Making the web visual and engaging.

The Image Tag & Alt Text

The Tag

Images are self-closing tags. They don't have a separate closing tag like .

src: Path to the image file.
alt: Alternate text for accessibility.

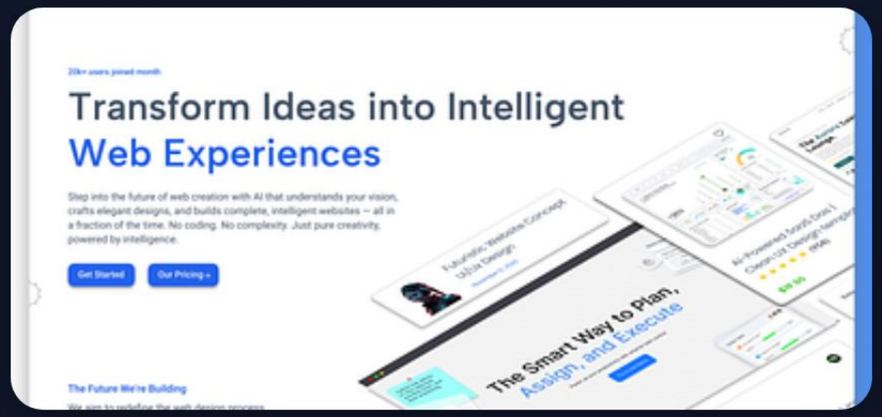
The Newspaper Analogy 📸

Alt text works like a description under a photograph in a newspaper. If the image doesn't load, the description explains the content.

Quick Attribute Reference

Attribute	Tag	Purpose	Example Value
`href`		Defines the link destination	"about.html"
`src`		Path to the image source	"logo.png"
`alt`		Text description for accessibility	"A blue cat"
`target`		Determines where to open the link	"_blank"
`width`		Sets the horizontal size	"300"

Mini Project: 3-Page Website

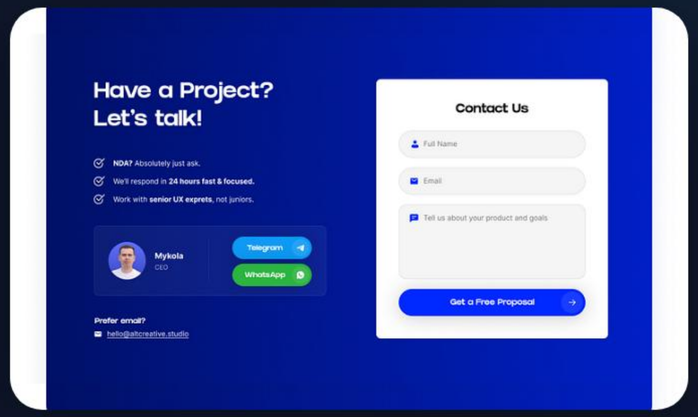


index.html

The Home Page. Contains links to About and Contact.

about.html

Information about you. Link back to Home.



contact.html

Email and contact info. Link back to Home.

Recap & Challenges

What You Learned Today

- Building pathways with Anchor tags.
- Structuring site-wide navigation.
- Integrating and sizing visual media.
- The importance of `alt` text.

Quick Quiz

1. Which tag creates a link?
2. How do you open a link in a new tab?
3. What does `src` stand for?
4. **Why is 'alt' text important?**

"Almost every interaction on YouTube, Amazon, and Google is just a link." — Developer Tip
